

GRADUATION PROJECT PRODUCT REFLECTION

Student Name Rebecca Hunter Product Title _____

Complete the following information for each numbered item.

1. Explain how the Product is an appropriate outgrowth or extension of the issue-based topic (Research Paper). Answer in at least 25 words.

The Product is an appropriate outgrowth of my Research paper because it uses one of the reasons for captivity and takes away part of the reason to keep and take animals into captivity.

2. Explain the steps required to develop and complete the final Product. Answer by listing at least five (5) steps completed.

The steps required to develop and complete the final Product were many. First I had to find a company or group to work with. Then I had to plan a day to go clean up. Next I had to invite and inform people. Then I had to plan how we were going to get there. Then we got there and cleaned. Last I had to create a visual aid to show how successful this was.

3. Describe what evidence is available to show 15 or more hours completed (photos, notebooks, videos). Refer to Graduation Project Product and Mentor Log, showing detailed information.

The evidence to show that I did what I claimed to have done is in pictures and my scrapbook. My log for my product shows all that I have done and my mentor and teachers who saw me do what I do signed to approve it.

4. Explain the learning stretch. The student should answer in at least 25 words how he or she grew during the completion of the Product and how this was a NEW experience for him or her.

The learning stretch that I had was about planning, showing leadership, and keeping the peace and calm through stress. I grew in many ways during this process. I grew by my maturity in handling situations that make me uncomfortable. I do not like speaking in front of people or putting myself in the spot light and I grew in the acceptance that sometimes you have to put yourself into uncomfortable positions to gain what you need. This was a new experience for me because I did not have the option of making someone else taking the heat and doing the stuff for me.

5. Demonstrate the application of knowledge, and explain the use of problem solving. Answer in at least 25 words explaining how problem solving was used during the Product development.

The application of knowledge that I had to go through was using my knowledge of why the animals are in captivity to help me come up with an idea for my product. I also had to work with myself to gain the courage and brain to overcome all the issues that came.
